

Example model 1

(a) Model and flux projection

(b) Embedded model

(c) Simulation

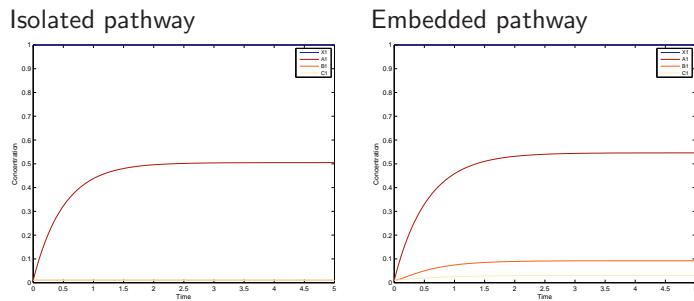

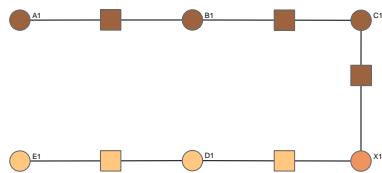

Figure 1: Example model 1

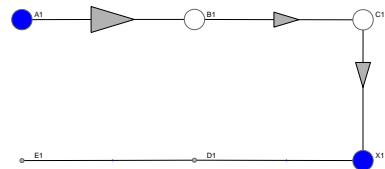

Example model 2

(a) Original models

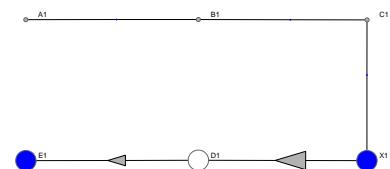

Embedded pathways (light/dark)

Predefined flux 1

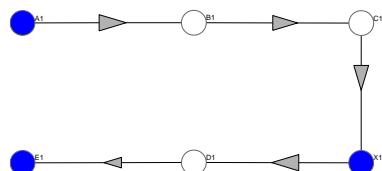

Predefined flux 2

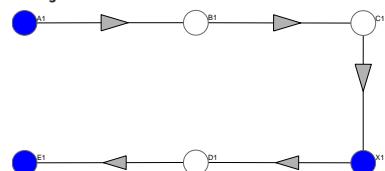

(b) Flux projection

Predefined fluxes

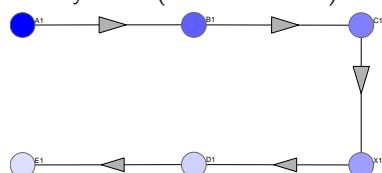

Projected flux

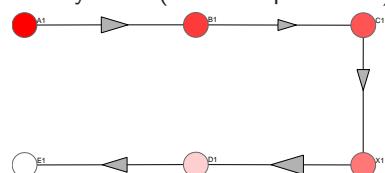

(c) Embedded model

Steady state (concentrations)

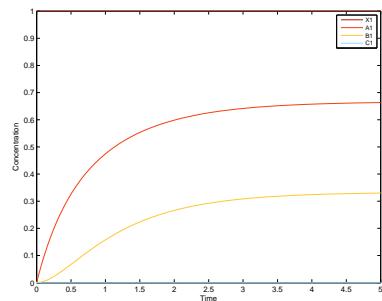

Steady state (chemical potentials)

(d) Simulation

Isolated pathway

Embedded pathway

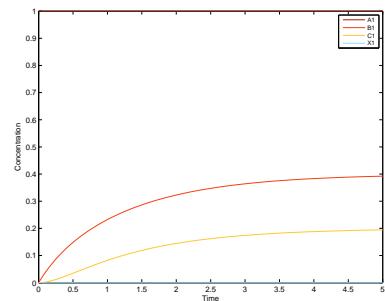

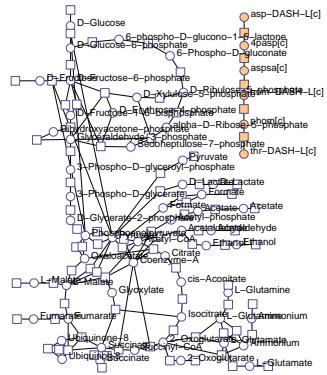

Figure 2: Example model 2

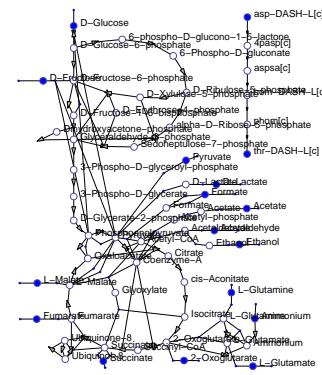

E. coli threonine pathway, embedded in central metabolism

(a) Model and flux projection

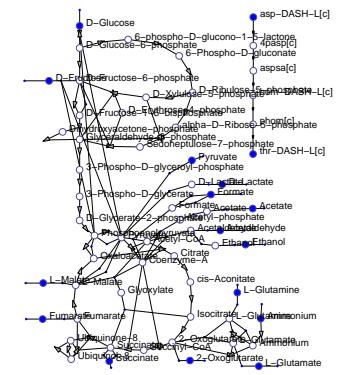

Embedded pathway (brown)

Predefined pathway flux

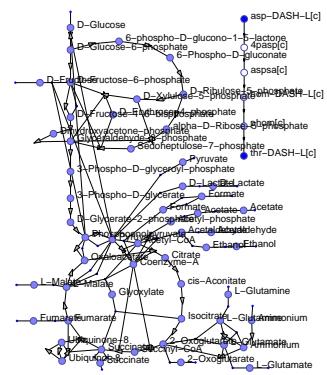

Projected, stationary flux

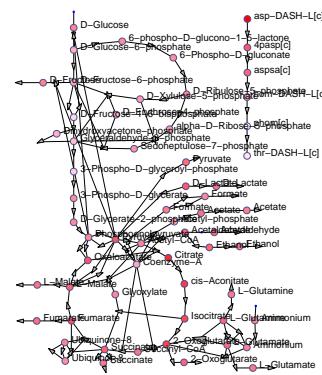

(b) Embedded model

Steady state (concentrations)

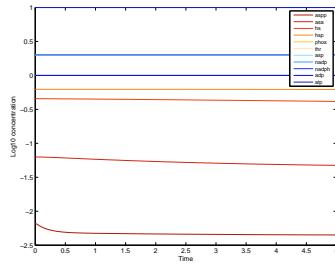

Steady state (chemical potentials)

(c) Simulation

Isolated pathway

Embedded pathway

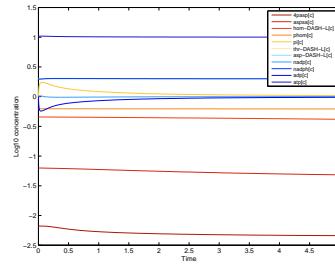

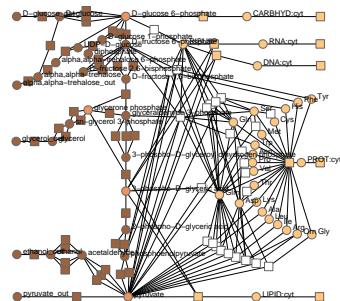

Figure 3: Threonine model

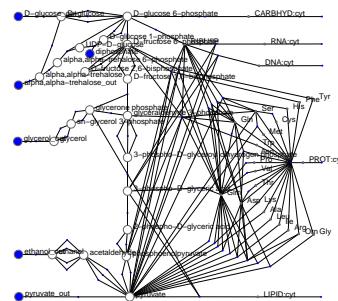

Yeast central metabolism and biomass production

(a) Original models

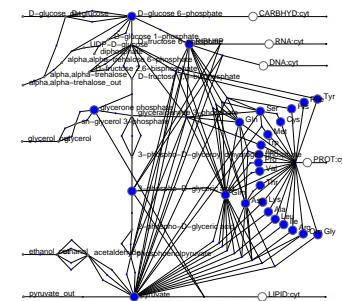

Embedded pathways (light/dark)

Predefined flux 1

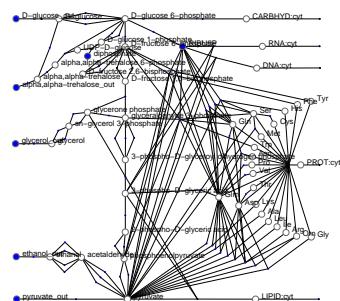

Predefined flux 2

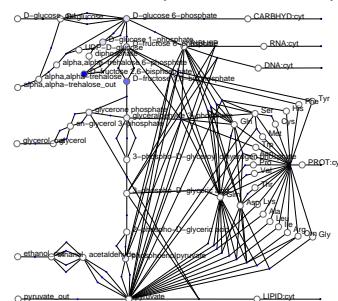

(b) Flux projection and steady state

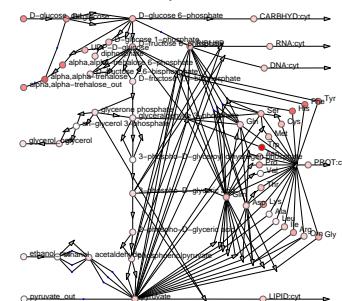

Predefined pathway fluxes

Steady state (concentrations)

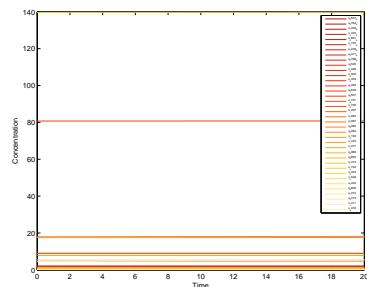

Steady state (chemical potentials)

(c) Simulation

Isolated pathway

Embedded pathway

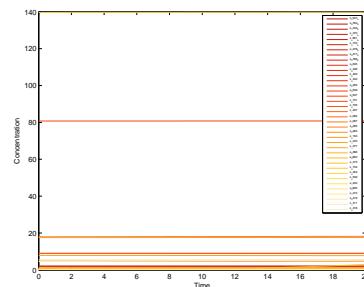

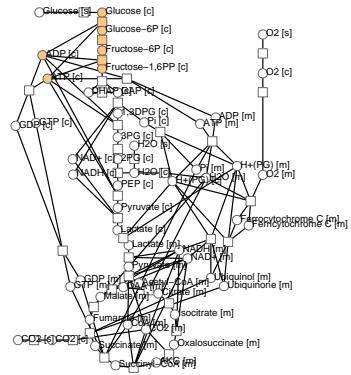

Figure 4: Part of yeast consensus model

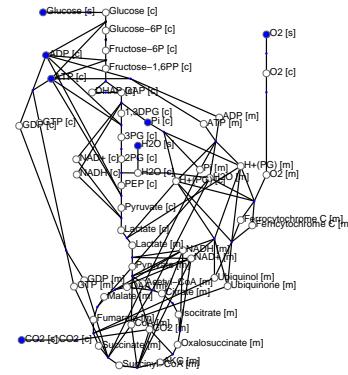

Hepatonet model

(a) Model and flux projection

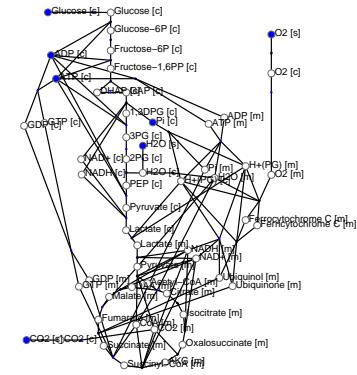

Embedded pathway (brown)

Predefined pathway flux

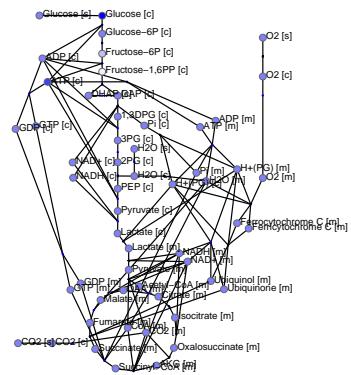

Projected, stationary flux

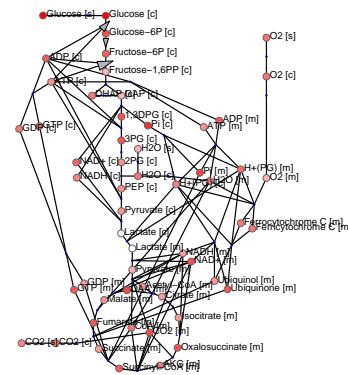

(b) Embedded model

Steady state (concentrations)

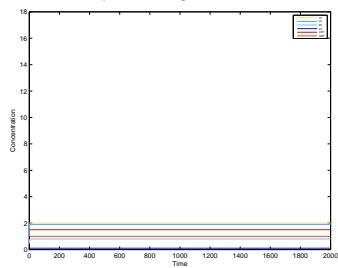

Steady state (chemical potentials)

(c) Simulation

Isolated pathway

Embedded pathway

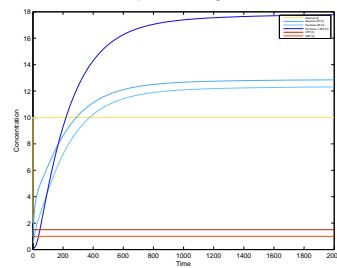

Figure 5: Part of hepatonet liver model (ATP regeneration)
